### Did you know?

The oceans cover over 70% of our planet. We are all dependent on them for food, transport and vital resources. They affect our weather and even our future as a species. Yet most of us are unaware of the cutting-edge developments in underwater technology, or the science it is based on, largely because it is hidden from view.

### Aims of the day

This event will provide a preview for P6 to S2 (10 to 14 year old) school children to explore the **careers opportunities** that our oceans have to offer.

### Programme 10.30 – 15.00

The day's timetable will include a structured mix of audio-visual presentations by leading industry experts from a range of underwater science and technology backgrounds, and an opportunity to see the vast array of maritime exhibits that the venue of this event has to offer. Subjects include:

- Underwater technology and robotics
- Deep-sea diving and its equipment
- Salvage from deep-sea wrecks
- The marine environment and its inhabitants
