The Palm Court Hotel, Seafield Road, Aberdeen, AB15 7YU**

Chairman: Alasdair Maconochie, Technip UK Limited

**Neil Brown, Acergy
Foundation Design Codes - Bibles or Blinkers?**

**Meysam Banimahd, Technip UK Limited
Beyond the Standard - Grillage and Gratings**

**Neil Morgan, Lloyds Register
Engineering a Foundation around the Standards**

The Offshore Site Investigation and Geotechnics (OSIG) Committee of the SUT established the GeoForum in 2001. The GeoForum aims to provide a focal point and discussion group for professionals involved in the offshore Geoscience industries in the North East of Scotland.

This GeoForum will discuss the design of subsea structure foundations and the use of alternative methodologies to API and DNV to optimise foundation design. Perspectives will be given for the leading installation contractors and certifying authorities on the impact of foundation design optimisation.

The GeoForum is open to all and it is hoped that a lively debate and discussion amongst attendees will follow the presentations.

This event is FREE to attend but as places are limited please do pre-register with SUT by contacting Michele Ross on email michele.ross@sut.org or by tel. 01224 823637.
